Pros and cons of joint finances

There are benefits and risks for couples who decide to manage their money together.

Many couples maintain independent finances, but operate one or more joint accounts to cover bills or for savings. But differing attitudes to spending and saving can be a source of tension.

Once you buy a home together, or just open a joint account, your finances become inter-linked. You will then be 'co-scored' when applying for credit, and a partner's poorer credit score can impact on your rating. If you have a shared mortgage or loan, you will also be liable for the whole debt if your partner can't, or won't, contribute to the repayments.

Switching investments

Where one partner is a basic rate taxpayer or non-taxpayer and the other pays income tax at a higher rate, it could be worth switching savings or investments to the lower earner to reduce the overall tax payable. Husbands, wives and civil partners can normally transfer assets freely between each other without incurring tax on any gains realised by the gift.

Once you buy a home together, or just open a joint account, your finances become inter-linked.

Higher earners can choose to contribute to the pension of a lower-earning spouse, with the amount of tax relief available the greater of £3,600 or their relevant UK earnings. This could help couples make best use of both of their personal allowances for income tax in retirement.

One word of warning: if an account is also in a partner's name, they are then legally entitled to the money. Trust is key. Couples must be comfortable discussing their finances.

Levels and bases of taxation and tax reliefs are subject to change and their value depends on individual circumstances.

The value of your investment can go down as well as up and you may not get back the full amount you invested.

INVESTMENT

UK dividends continue to perform

UK dividend yields are better than you might imagine.

Dividends have been rising. UK companies paid out £94.4 billion in dividends in 2017, a 10.5% increase over the previous year. The increase for 2018 is expected to be markedly smaller, as last year's payouts benefited from exchange rate gains that are unlikely to be repeated.

Nevertheless, UK shares are well worth considering if you are looking for income from your investments. The overall dividend yield for the UK stock market is currently about 3.6%, with shares in the FTSE 100 offering an average yield of 3.7%, in part because of the rise in dividends and the fall in share prices since the start of the year. And don't forget personal tax on dividends is less than on interest.

There is a wide range of UK Equity Income funds to choose from, so care is necessary when making a selection. Last year 60% of dividend payments by value were accounted for by just 15 companies. This can mean funds have highly-concentrated portfolios.

For advice on fund selection don't just look for the highest yield, talk to us.

Past performance is not a reliable indicator of future performance.

Investing in shares should be regarded as a long-term investment and should fit in with your overall attitude to risk and financial circumstances.

A new era for VCTs and EISs as rules change

There has been a major overhaul for venture capital trusts (VCTs) and enterprise investment schemes (EISs).

The changes come as a response to a government consultation paper published last summer on “patient capital”. The paper criticised some EIS and VCT providers, saying, “Industry estimates suggest that the majority of EIS funds ... had a capital preservation objective in tax year 2015/16, and around a quarter of VCTs have investment objectives characteristic of lower risk capital preservation”.

Two key points emerged from the new rules:

■ **‘Risk to capital’ condition** VCT and EIS investments must now be made in companies that have objectives to grow and develop, and where there is a significant risk of loss of capital, after allowing for tax relief. This is to prevent an emphasis on capital preservation that was criticised in the consultation paper.

■ **Tax reliefs** There were no changes to the levels of tax reliefs given to VCTs and EISs. The main rate of income tax relief for

subscriptions remains at 30%. The relief can be clawed back if the investment is sold prematurely or ceases to qualify, with clawback periods remaining at five years for VCTs and three years for EISs. Similarly, the capital gains tax advantages of VCTs and EISs were left intact.

TAXATION

Stuck in frozen tax thresholds?

The value of key tax thresholds is being eroded as elements of the income tax system lag behind inflation.

Three key thresholds relating to income tax have been subject to this treatment:

■ **High income child benefit tax charge**

This tax charge, introduced in January 2013, claws back child benefit at the rate of 1% for each £100 of income over £50,000 (based on the higher of the two parental incomes). That £50,000 threshold has not changed since its introduction.

■ **Personal allowance tapering** The personal allowance is reduced by £1 for every £2 you earn over £100,000, and has not been revised since it was introduced in 2010.

■ **Additional/Top rate tax starting point** The additional tax rate started in 2010/11 with a threshold of £150,000. Whilst it has since been reduced from 50% to 45% (46% in Scotland), the threshold has not increased.

You can limit the effect of these income-driven thresholds by reducing the income being measured. For example, you may be able to transfer investments to your spouse or civil partner, or use personal pension contributions to reduce your income for tax purposes.

ISAs and some other investment products can also shelter your income and prevent it counting towards thresholds.

As it is early in the tax year, there is more scope for reducing the effect of these freezes in 2018/19, with professional advice.

PENSIONS

Pension scams and cold calling

Be wary of cold-callers who offer a ‘free’ pension review – it could cost you more than you think.

Cold-calling has increased since pension freedoms were introduced in 2015, including from fraudsters trying to persuade people to move their pension into unregulated investments.

The government has proposed legislation banning these calls, but this has yet to take effect. Government figures suggest pension savers have lost more than £43 million through such scams. Pensions transfers potentially put your savings at risk, and if you are under 55 you may face additional tax charges. Some cold-callers aren’t trying to pocket your pensions savings, but may recommend higher-charging pensions, from which they receive an ‘introducers’ fee.

Please get in touch if you want to review existing pension arrangements, particularly older company schemes.

✚ *Occupational pension schemes are regulated by The Pensions Regulator.*
